Abanoub Samir

Front-End Developer | Angular | React.js

abanoubsamir2811@gmail.com +201277744647 Cairo, Elmatria LinkedIn Github Portfolio

PROFILE

Frontend Developer specializing in Angular (v18) and React (TypeScript), building scalable, responsive, and high-performance web applications. Experienced in RESTful APIs integration, state management, and real-time systems using Firebase. Passionate about clean architecture and performance optimization.

EDUCATION

- **Information Technology Institute (ITI) -** Studied Frontend and Cross-Platform Mobile Development (05/2024 - 10/2024).
- **Bachelor of Science - Aswan University - Grade: Good** (09/2017 - 07/2021).

EXPERIENCE:

GasdWahed (جسد واحد):

- **Role:** Frontend Developer
- **Stack:** Angular, TypeScript, Angular Material, Bootstrap, SCSS, RESTful APIs, ngx-translate, Capacitor
- **Features:** Multi-step family forms with strong validations, assistance tracking, role-based access control, advanced search (ID / phone), in-app PDF viewer, users & roles management, responsive design, mobile-ready using Capacitor.
- **Description:** Developed a church services platform with modular dashboards and robust validations to manage families, users, and roles efficiently. Converted the web application into a cross-platform mobile app using Capacitor to improve accessibility and expand service capabilities. Implemented multi-language support with ngx-translate and integrated RESTful APIs for seamless data handling.
- **Live Demo:** gasdwahed.com

La Tahsooha (لا تحصوها):

- **Role:** Frontend Developer
- **Stack:** Angular 18 (Standalone), TypeScript, RxJS, Angular Router, Capacitor and Bootstrap.
- **Features:** User authentication UI, blessings management (CRUD interface), rotating home screen display, REST API integration, form validation, responsive mobile-first design, Android APK build.
- **Description:** Developed the frontend of a gratitude tracking application that allows users to create accounts and document their daily blessings. Implemented dynamic UI rendering to display saved blessings on the home screen in a rotating format for enhanced user engagement. Integrated the Angular 18 standalone application with an ASP.NET Core RESTful APIs, handled authentication flows, form validation, and API communication. Packaged the web application into an Android APK using Capacitor to deliver a mobile-ready experience.

Pulso – Hospital & Clinic Management System

- **Stack:** React (TypeScript), Vite, Tailwind CSS, Firebase (Auth & Firestore)
- **Features:** Real-time patient queue tracking, estimated waiting time calculation, live position updates, authentication system, responsive dashboard, role-based views for doctors and hospital admins.
- **Description:** Developed the frontend of a hospital and clinic management system focused on real-time patient queue tracking. Implemented dynamic logic to calculate and display each patient's exact position in the queue along with estimated waiting time based on current flow. Integrated Firebase Authentication and Firestore to enable real-time updates, ensuring instant synchronization between staff and patients. Built separate dashboards for doctors to manage their patients and for hospital admins to oversee all operations, with a responsive and modern UI using Tailwind CSS, optimized for performance with Vite and a modular React architecture.
- **Live Demo:** https://frontend-final-project-pi.vercel.app

PROJECTS:

Role-Based E-Commerce Platform with Multi-Dashboard System

- **Role:** Frontend Developer
- **Stack:** React, TypeScript, Tailwind CSS, Vite
- **Features:** Multi-role system (Admin, Manager, Employees, Customers), role-based dashboards, authentication, protected routes, dynamic UI rendering, responsive design
- **Description:** Developed a full-featured e-commerce platform supporting multiple user roles including Admin, Manager, Employees, and Customers, each with dedicated dashboards and permissions. Implemented role-based access control, protected routes, and dynamic UI rendering based on user roles. Focused on scalable architecture, reusable components, and delivering a seamless user experience across all user types.
- **Live Demo:** https://ecommerce-kappa-tawny-82.vercel.app/

Jop Platform – Job Marketplace & Dashboard System

- **Role:** Frontend Developer
- **Stack:** React, TypeScript, Tailwind CSS, Vite, Supabase
- **Features:** Dual interfaces (Employer & Job Seeker), authentication system, job posting & application workflow, real-time database integration, responsive design
- **Description:** Developed a full-featured job marketplace platform with separate interfaces for employers and job seekers. Implemented authentication and real-time data handling using Supabase, allowing employers to post and manage jobs while enabling users to browse and apply efficiently.
- **Live Demo:** https://jopplatform.vercel.app/

TECHNICAL SKILLS:

- **Frontend:** Angular 18 (Standalone), React (TypeScript), HTML5, CSS3, Tailwind CSS, Bootstrap.
- **State Management & APIs:** RxJS, RESTful APIs, Firebase (Auth, Firestore), Redux Toolkit (React).
- **Tools & DevOps:** Git, GitHub, Vite, Capacitor, AI Agents(n8n), Automation.
- **Database:** Firebase Firestore, SQL.

SOFT SKILLS:

- Strong problem-solving skills.
- Good communication and teamwork.
- Ability to work under pressure.
- Continuous learning mindset.

LANGUAGES

- **Arabic:** Native.
- **English:** Very Good.
